Engine and immobiliser alignment

Trial substitution of control units

Setting of car/key memory options

Clearing adaptation values

Adjustment of engine control units

Full component activation

Fitting of BMW accessories

Real-time reading of all dynamic data

Reading and resetting of fault codes

Performance Tuning

Correction based service (CBS) quick test

Complete coverage

Autologic[®] for BMW is a diagnostic tool uniquely designed to replicate the functionality of the tools used by the manufacturer's dealers. It enables independent garages to provide comprehensive BMW service in their own workshops without relying on dealer availability. The basic system offers total diagnostic coverage on all engine, chassis and body systems on E34, E36, E38, E39, E46, E53, E60, E63, E64, E65, E83, E85 & Mini. The dealer-level software uses simple touch-screens with extensive help menus, and provides real-time data including graphing, component activation, programming, coding and read and clear fault codes.

Complete technical support

Autologic[®] users have free access to our Vehicle Technical Support team, staffed by factory-trained Master Technicians with a combined total of 50 years main dealer experience between them. Instant professional help is only a phone call away.

Complete software support

Autologic[®] is unique in the diagnostic world in having a built-in data logger which has the capability to record any software bugs or unidentified ECUs and email the details to the appropriate software developer at Diagnos. Internet communication with the Autologic[®] system enables a fix file to be created and mailed back to the user, usually the same day. A new software version is then created and posted for all users to download. All software revisions and upgrade modules are available free, during the warranty period, via the website. The Autologic[®] data logging facility ensures constant software improvement with the minimum of inconvenience to the user – no waiting for new CDs, pods or cartridges. Autologic[®] is a truly 'live' diagnostic tool.

Additional software

New dealer-level software for Mercedes Benz, Jaguar and Land Rover vehicles has been designed to run on the same platform as Autologic[®] for BMW, offering our customers an extended servicing capability and great value for money.
