values*

*Programming of all engine and
transmission ECUs*

*Engine management
performance tuning*

*Vehicle and ECU
configuration including:*

- Market programming
- Programming of keys and alarms
- Installation and programming of
all body modules

Complete coverage

Autologic[®] for Land Rover is a diagnostic tool uniquely designed to replicate the functionality of the tools used by manufacturer's dealers. It enables independent garages to provide comprehensive Land Rover service in their own workshops without relying on dealer availability. The system offers total diagnostic coverage of all engine, chassis and body systems on the Defender, Discovery, Discovery 2, Discovery 3, all Freelanders and all Range Rover models including Range Rover Sport up to 2006 MY. The dealer-level software uses simple touch-screens with extensive help menus, and provides real-time data including graphing, component activation, programming and read and clear fault codes.

Autologic[®] Power Upgrade

This new upgrade is currently available for all Td4, Td5, Td6 & TdV6 models. Like all Autologic[®] software, the Power Upgrade is available for downloading from the website, and users simply run it on their existing Autologic[®] for Land Rover platform.

Complete technical support

Autologic[®] users have free access to our Vehicle Technical Support team, staffed by factory-trained Master Technicians with a combined total of 50 years main dealer experience between them. Instant professional help is only a phone call away.

Complete software support

Autologic[®] is unique in the diagnostic world in having a built-in data logger which has the capability to record any software bugs or unidentified ECUs and email the details to the appropriate software developer at Diagnos. Internet communication with the Autologic[®] system enables a fix file to be created and mailed back to the user, usually the same day. A new software version is then created and posted for all users to download. All software revisions and upgrade modules are available free, during the warranty period, via the website. The Autologic[®] data logging facility ensures constant software improvement with the minimum of inconvenience to the user – no waiting for new CDs, pods or cartridges. Autologic[®] is a truly 'live' diagnostic tool.

Additional software

New dealer-level software for Mercedes-Benz, Jaguar and BMW vehicles has been designed to run on the same platform as Autologic[®] for Land Rover, offering our customers an extended servicing capability and great value for money.
